Subject: Synbio technology for sports clubs

To whom it may concern,

I, Prof. dr. Luc Vanden Bossche, am head of the Department of Physical Medicine at Ghent University Hospital, and also club doctor at RSCA Anderlecht and previously KAA Gent, two former champions of the Belgian premier league.

In order to optimize the safety and hygiene of the team's players and staff, I have thoroughly evaluated the synbiotic products of Chrisal and found them to be very effective and safe. The Synbio Shield programme provides a permanent protection and cleaning effect by means of a combination of products for cleaning, hand hygiene and fogging.

I have been implementing the products at KAA Ghent for several years in the training facilities and the Ghelamco Arena soccer stadium. Also, at RSCA Anderlecht the products are currently introduced.

To my personal opinion and experience, the Synbio Shield technology by Chrisal is capable of offering an improved protection and hygiene to sports teams and the entire staff, in a sustainable and safe way. The reduced risk of infections following the implementation of the Synbio Shield technology will help to maximize the health of the team, staff and supporters. And this in turn will protect the true capital of any sports club, it's people!

Sincerely yours,

**Prof dr Luc Vanden Bossche**
